PROFILE

I'm Owen, a Flutter Developer with a strong passion for mobile application development. Skilled in building Android apps using Flutter with clean and efficient architecture. I'm currently also learning another programming language like Go to expand my capabilities as a Mobile Developer and my knowledge.

EDUCATION

2022 - 2026
UNIVERSITAS PRIMA INDONESIA

- Bachelor of Computer Science

WORK EXPERIENCE

2025 - PRESENT
Mobile Developer (Vendor Assignment)
PT Indo Web Host Kreasi
Client Project: PT Socfin Indonesia (Socfindo)
Indonesia | 2025 – Present

Laboratory System (Palm Oil Quality Control)

- Developed a mobile-based laboratory management system to replace manual paper-based recording processes.
- Implemented real-time automatic calculation formulas for quality testing parameters (e.g., moisture, FFA, impurity).
- Designed input-driven auto-calculation logic where data is processed instantly without manual triggers.
- Built offline-first architecture using SQLite to support remote plantation environments.
- Implemented automatic validation to reduce human error in laboratory reporting.
- Reduced paper usage and improved reporting efficiency through full digitalization.

Result: Increased data accuracy, minimized manual calculation errors, and improved lab operational efficiency.

SKILLS

- Flutter, Dart
- REST API, Firebase, SQLite
- GetX, BLoC, Provider
- Git, GitHub
- Clean Architecture
- UI/UX Implementation
- Critical Thinking

CERTIFICATE

- [Google Drive Folder Certificate](#)

LANGUAGES

- Indonesia
- English(Intermediate)
- Mandarin(Basic)

WORK EXPERIENCE

Production & Stock Measurement System

- Led development of a stock measurement and production tracking application for factory operations.
- Implemented automated stock calculation and aggregation system for daily production monitoring.
- Designed photo validation system with token-based verification to reduce manipulation and fraud.
- Built synchronization system to retrieve and reuse previous-day production data to simplify workflow.
- Applied offline-online synchronization to ensure uninterrupted factory operations.

Result: Improved stock accuracy, strengthened validation control, and enhanced transparency in production reporting.

Time Sheet & Workforce Management System

- Developed digital time sheet application integrated with face recognition for attendance validation.
- Implemented automated working-hour calculation to support payroll processing.
- Designed structured digital job reporting to simplify employee activity tracking.
- Integrated validation logic to ensure completeness and consistency of daily work records.
- Supported payroll workflow through accurate and validated attendance data.

Result: Reduced attendance fraud, improved payroll accuracy, and streamlined workforce reporting.

Expedition & Logistics System (NFC-Based)

- Implemented NFC card read/write functionality for device-to-device interaction in low-connectivity environments.
- Designed logistics workflow using NFC as offline data transfer mechanism between operational units.
- Integrated expedition system with digital lab, production, and weighing scale data.
- Built secure synchronization logic to ensure data consistency once network connectivity is restored.

Result: Enabled reliable logistics operations in remote areas and improved traceability between production and expedition units.

WORK EXPERIENCE

■ 2025 - PRESENT

Mobile Developer (Vendor Assignment)

PT Indo Web Host Kreasi

Client Project: Unilever Oleochemical Indonesia

Indonesia | 2025 – Present

Unilever AI CCTV Project

- Joined an ongoing AI project during the mid-development phase at Unilever Oleochemical
- Assisted the team in developing a computer vision system using YOLO for PPE compliance detection via CCTV
- Supported testing and validation of PPE violation detection and incomplete safety attributes
- Contributed to data handling and review of detection results stored in the database
- Gained hands-on exposure to worker identification concepts used to reduce duplicate detections
- Collaborated with senior AI engineers during development and evaluation phases
